Fluxys Belgium: Market Consultation 56: Changes in the regulatory documents for transmission

From 16 May to 6 June 2022, Fluxys Belgium is holding a market consultation on the regulatory documents applicable for transmission. This market consultation will focus on:

- Changes for the subscription and allocation of Entry services on Dunkirk LNG

The following document summarizes the proposed changes: One page note

Documents in consultation (with track changes)

- Transmission Program
- Access Code for Transmission Attachment B

You are kindly invited to send your written comments to marketing@fluxys.com by Monday June 6th 2022 close of business.

Please specify in your response, whether the content is to be treated as confidential or not. Unless otherwise mentioned, all comments will be treated as non-confidential.

Yours sincerely,

Ilse Guedens

Questions & Answers

Questions and Answers					
#	From	Confidential?	Topic	Questions / Comments by Stakeholders	Answers / Comments by Fluxys Belgium
1.	Socar	No	Supportive reaction	SOCAR Trading Gas and Power Sarl is supportive to the proposed adjustment of Fluxys access code for transmission to change the current allocation rules of the entry Services from Dunkerque terminal to Belgium gas network by a pro-rata basis based on the newly subscribed regasification capacity at Dunkerque terminal. We also support the proposal that the allocation request shall be included in the submission request for the Service during the Call for Market Interest organised by Dunkerque LNG. Considering the current geopolitical situation in Europe, the allocation process of new regasification capacity shall include (if possible) sufficient entry access to different gas networks in EU to ensure as much as possible a diversification of the gas supply.	/
2	Engie	No	Supportive reaction	ENGIE welcomes Fluxys' proposal on the subscription and allocation of Services on Dunkirk LNG, as we feel that it is a sensible solution to manage transmission capacity at LNG points.	/
3	Dunkerque LNG	No	Supportive reaction	Dunkerque LNG believes that adding the possibility of a pro-rata allocation of the remaining entry capacity towards Belgium, based on the outcome of our terminal's long term capacities sales, will contribute to the security of supply by bringing new LNG to the EU and increase the liquidity of the European gas markets.	/
4.1	RWE S&T	No	Supportive reaction	RWE Supply & Trading supports the proposal described in the above market consultation as it is consistent with and supportive of the Dunkerque "call for market interest" capacity sales process.	/
4.2	RWE S&T	No	Capacity congestion	We are concerned however, that such "reservation" of Virtualys capacity for additional LNG entry capacity could further deepen the already congested situation at the Virtualys interconnection. So instead of relying on already existing interconnection capacity, we strongly suggest there is a need to increase the current French interconnection capacity, by either increasing Virtualys capacity or by enabling physical reverse flow at Obergailbach.	Putting the capacity at Virtualys also allows Network Users to bring the gas from the CMI to Belgium but with the need to book additional Entry and Exit capacity in France. Just increasing the capacity from France to Belgium would not bring additional gas to the requesting countries (the Netherlands or Germany) because the downstream capacity is already highly used. Obergailbach is an Interconnection Point between France and Germany so we have no comment on this topic.

Dear Fluxys team,

In reference to the Market Consultation # 56 (launched by Fluxys on 16th May 2022), SOCAR Trading Gas and Power Sarl is supportive to the proposed adjustment of Fluxys access code for transmission to change the current allocation rules of the entry Services from Dunkerque terminal to Belgium gas network by a pro-rata basis based on the newly subscribed regasification capacity at Dunkerque terminal. We also support the proposal that the allocation request shall be included in the submission request for the Service during the Call for Market Interest organised by Dunkerque LNG.

Considering the current geopolitical situation in Europe, the allocation process of new regasification capacity shall include (if possible) sufficient entry access to different gas networks in EU to ensure as much as possible a diversification of the gas supply.

Please let us know if you require any further clarification from our side

Best regards

Francesca

Dear team,

Please find below ENGIE's comment on the changes proposed in the market consultation n°56 :

ENGIE welcomes Fluxys' proposal on the subscription and allocation of Services on Dunkirk LNG, as we feel that it is a sensible solution to manage transmission capacity at LNG points.

Kind regards,

Dear,

We hereby provide our support for the proposed changes as explained in the Public Consultation.

Dunkerque LNG believes that adding the possibility of a pro-rata allocation of the remaining entry capacity towards Belgium, based on the outcome of our terminal's long term capacities sales, will contribute to the security of supply by bringing new LNG to the EU and increase the liquidity of the European gas markets.

Best regards,

Cedric

Dear Sirs,

RWE Supply & Trading supports the proposal described in the above market consultation as it is consistent with and supportive of the Dunkerque “call for market interest” capacity sales process.

We are concerned however, that such “reservation” of Virtualys capacity for additional LNG entry capacity could further deepen the already congested situation at the Virtualys interconnection. So instead of relying on already existing interconnection capacity, we strongly suggest there is a need to increase the current French interconnection capacity, by either increasing Virtualys capacity or by enabling physical reverse flow at Obergailbach.

Best regards,

Steve Rose
